## SKILLS

---

Java • Python • Ansible • C/C++ • HTML/CSS • Angular • Laravel • SpringBoot • SQL • Git • AWS • Windows • Linux • Android

## EXPERIENCE

---

### Automatic Data Processing, LLC

Norfolk, VA

Associate Application Developer | ADP.com

July 2019 – Present

- Serve as a Site Reliability Engineer on an agile scrum team with full-stack skillset to monitor and maintain over 3,000 production-level, time-keeping systems in support of company payroll products.
- Identify and implement event-driven, automated solutions in Ansible, a systems programming language, to eliminate 50% of systems operation toil across company products, freeing up company resources and availability for other needs.
- Make recommendations to supervisors regarding best practices, potential pitfalls, and other matters related to team goals, seeking excellence in software development and solutions engineering.
- Assume subject matter expert responsibility for several key team offerings to bolster overall team readiness for business and client needs.
- Design, develop and implement several web-based deliverables for end-user consumption, including a client scheduling system to automate an otherwise manual and labor-intensive process.
- Audit and evaluate the work of colleagues to ensure quality and consistency with company standards for deliverable products.

## EDUCATION

---
